

Science practice collaboration model

Mari Ariluoma 8.5.2018

Use of the model in
iWater project

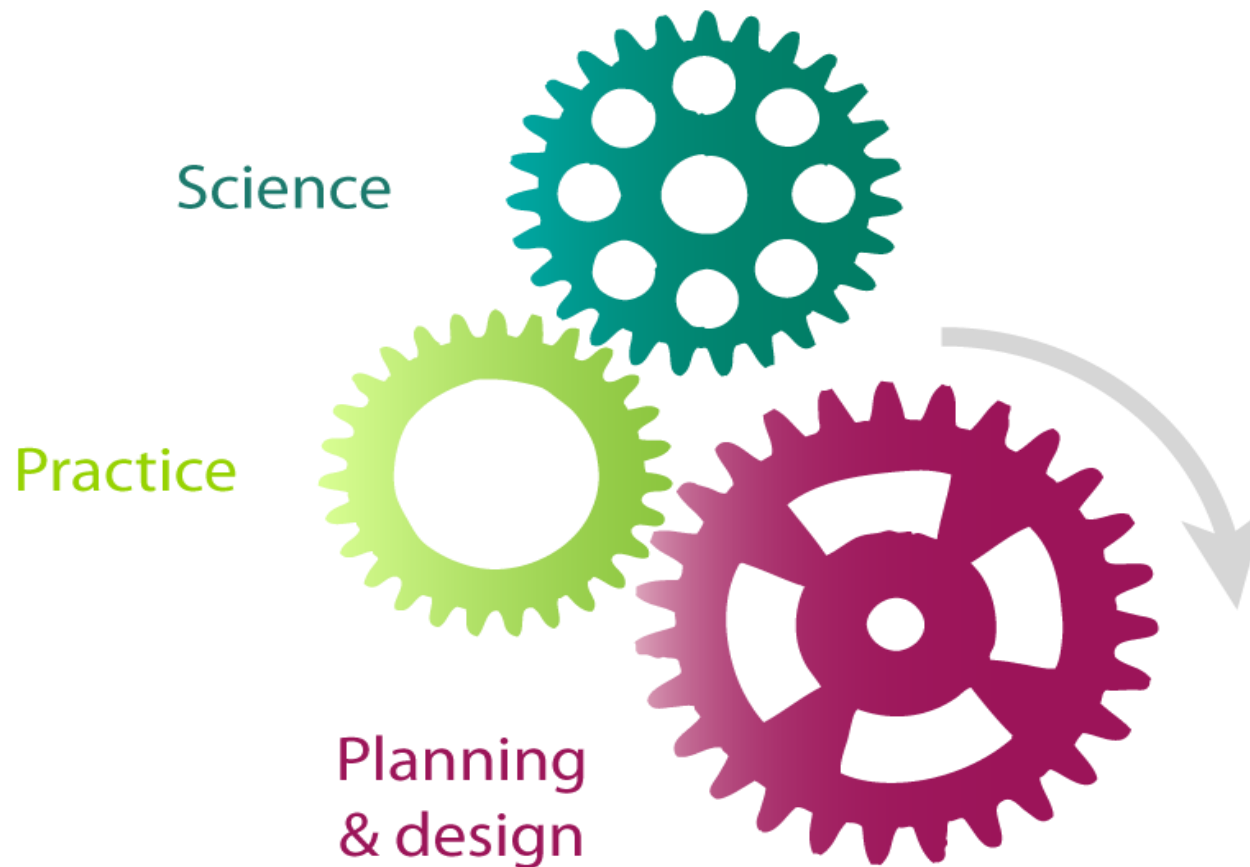

**Why is science-
practice
collaboration
needed?**

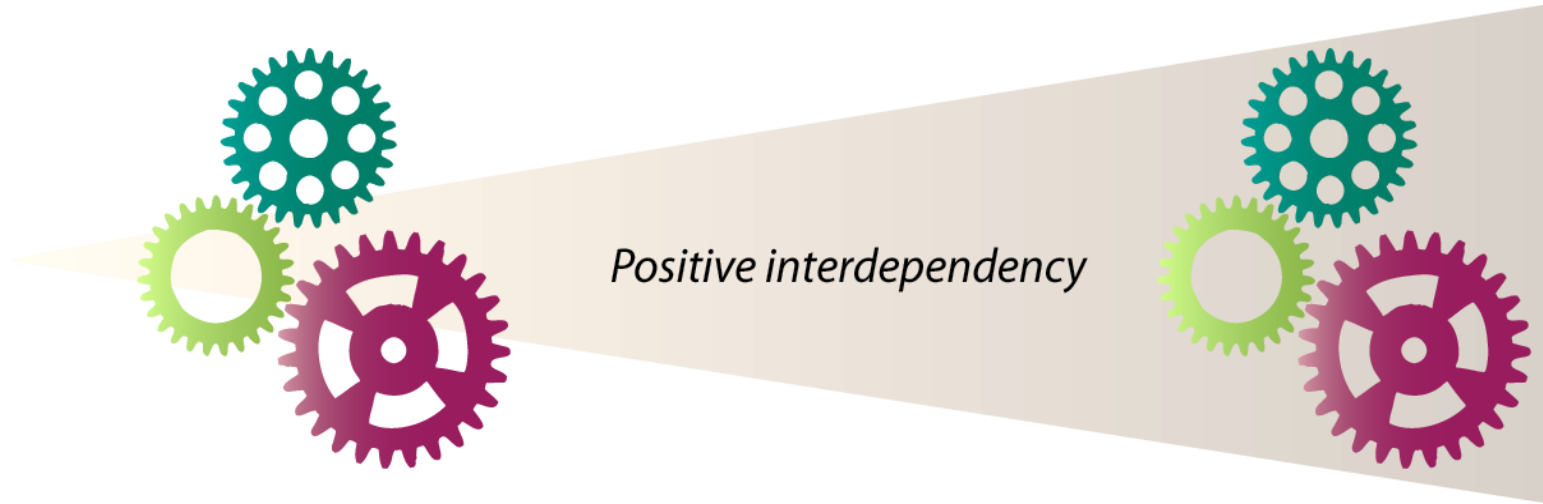

Why is science-practice collaboration needed?

- The multidisciplinary nature of the Green Infrastructure (GI) concept is a challenge.
- Planning for GI requires for new thinking about the relationship of nature and the built environment.
- Knowledge exists and is available but is not utilized
- Researchers should tune their methods to problem solving in practical cases
